DETAILED ACTION

Drawings

1. Figures 1, 2a, 2b, and 2c should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g). Corrected drawings in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. The replacement sheet(s) should be labeled "Replacement Sheet" in the page header (as per 37 CFR 1.84(c)) so as not to obstruct any portion of the drawing figures. If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 20-26 are rejected under 35 U.S.C. 102(b) as being anticipated by Mongia et al, cited by applicant.

The paper to Mongia et al, titled "Theoretical and Experimental Investigations on Rectangular Dielectric Resonator Antennas", discloses, in figure 5, a dielectric resonator antenna comprising a DRA, a dielectric substrate, a ground plane, and a microstrip feedline provided on the surface of the DRA.

Allowable Subject Matter

4. Claim 27 is objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

5. Claims 1-19, and 28-30 are allowed.

Claims 1 and 10 recite a dielectric resonator antenna and method of manufacturing the dielectric resonator antenna comprising a dielectric resonator, and wherein a majority of the longitudinal surface of the dielectric resonator is provided with a conductive layer and the region of the longitudinal surface being free of the conductive layer. The patent to Adachi et al (US 6,198,450), cited herein, fails to teach this limitation.

6. The patents to Ricardi, Locus, Lee, Filipovic, Engheta et al, and Backhouse et al are cited as of interest showing the RDA similar to that disclosed.
